described in detail in U.S. Patent Application Serial No. _____
entitled "A Method, System and Program Product for Multiprofile Operations and
Expansive Profile Operation," by Shell Simpson, Ward Foster, and Kris Livingston
and bearing Attorney Docket No. 10007690-1, the disclosure of which is hereby
5 incorporated by reference into the present disclosure.

As indicated in FIG. 3, the system 300 includes an imaging client device 302.
The imaging client device 302 comprises a web browser 304 that is adapted to access
web content 306 derived from imaging service web content 314 and color adjustment
service web content 318 of web servers 312 and 316, respectively. The web content
10 306, like content 212, typically comprises text, graphics, and various commands. The
commands can comprise one or more sets of executable instructions that are
downloaded into the browser 304 to perform a service requested by the user. These
instructions can be written in any suitable language including, for instance, HTML,
Java™, JavaScript™, C-sharp, or other appropriate language. A variety of different
15 functionalities can be served by the executable instructions. For example, the web
content 306 normally includes executable instructions for causing target graphics, *i.e.*
graphics provided by an accessed web site, to be displayed to the user.

In the embodiment shown in FIG. 3, the executable instructions are further
used to access a personal imaging repository 320. These instructions typically
20 comprise system-wide generic access instructions 308 that call on methods of an
imaging extension 310 to access the personal imaging repository 320 and perform
various web imaging operations. These instructions 308 are designated as "generic"
because they are independent of the configuration of the user's personal imaging
repository 320. As is discussed in greater detail below, the generic access instructions
